The POS LVX-125 is available as a turn-key or OEM GNSS-Inertial solution that supports two antenna GNSS heading for the highest accuracy in all dynamic conditions, and includes the all new Applanix IN-Fusion+™ GNSS-aided inertial firmware featuring Trimble ProPoint™ GNSS technology.

Positioning and mapping applications require accurate heading information immediately and in all phases of operation from stop-and-go traffic to highway speeds.

With a compact footprint, ease of integration, and fast setup the POS LVX-125 uses onboard inertial sensors calibrated with the Applanix SmartCal™ software compensation technology for superior performance to meet the needs of ground vehicle applications in rail, mobile mapping, pavement management, fleet management, and vehicle testing.

Easily integrated with many types of sensors including optical, infrared, and LiDAR, the POS LVX-125 delivers high accuracy positioning and orientation in a small, lightweight form factor.

The POS LVX product uses state-of-the-art low noise multi-frequency Trimble Maxwell™ GNSS technology, and tracks all current satellite signals including GPS L1/L2/L2C/L5 and GLONASS L1/L2, QZSS, Beidou, IRNSS, and Galileo, and supporting SBAS, RTK, and Trimble CenterPoint® RTX™ positioning modes.

The POS LV-125 is tightly integrated with POSPac Mobile Mapping Suite, Applanix’ industry-leading software for accurately geolocating mobile mapping sensors. Optimized for all environments and platforms (air, land, and marine), and compatible with a variety of mapping sensors, this smart software solution achieves both maximum accuracy and efficiency.
